Google Workspace Marketplace

Hi,

Your current App submission for **Yearly (729862306327)** has been rejected because it does not comply with some of the [Google Workspace Marketplace guidelines](#) and has to be resubmitted.

In order to address the issues listed below, you will need to make changes in the [Google Workspace Marketplace SDK](#) settings in your app.

1. Give proper attribution when using Google Trademarks in your App name or Descriptions.

Most of Google's products are trademarked. What this means for your product listing is that, whenever you use the names of these products, you must append a TM symbol to them.

For example: Productivity Tool for ChatTM

You may also add a footnote to the detailed description regarding the trademark.

For example: Google ChatTM is a trademark of Google LLC

You can find more information on our branding guidelines here: https://developers.google.com/workspace/marketplace/terms/branding#giving_proper_attribution

You can also find a list of trademarked Google products here: <https://about.google/brand-resource-center/trademark-list/>

Additional notes: Whenever you mention a Google product, please ensure you include the trademark symbol (TM)—for example, Google SheetsTM. This requirement applies to your app title as well as both the short and detailed descriptions. <https://photos.app.goo.gl/ugPxBDRhSitQKNtf6>

Developer documentation: <https://about.google/brand-resource-center/guidance/apis/#legal-attribution>

2. All applications must integrate with one or more of the core Google Workspace Services APIs to integrate with Google Workspace. Core Google Workspace Services are those which are listed at the following URL: http://www.google.com/apps/intl/en/terms/user_features.html

Apps that only use default scopes are not allowed. Google Workspace Services APIs must be used and configured on your App.

Additional notes: The list of scopes should match exactly on

Additional notes. The list of scopes should match exactly on every configuration. Please check this is done correctly in the following screens: List of scopes used in the AppScript. ('Overview' section → Project OAuth Scopes) List of configured scopes in the Configuration section of the marketplace SDK. Status of the OAuth verification in the consent Screen section. List of configured scopes in the OAuth consent Screen section. All applications must integrate with one or more of the core Google Workspace Services APIs to integrate with Google Workspace. Core Google Workspace Services are those which are listed at the following URL: http://www.google.com/apps/intl/en/terms/user_features.html Apps that only use default scopes are not allowed. Google Workspace Services APIs must be used and configured on your App. <https://photos.app.goo.gl/yJYQs29q47qQGeMc9>

Developer documentation: <https://developers.google.com/workspace/marketplace/about-app-review#areas>

3. The app is missing OAuth verification.

Your app is requesting sensitive or restricted OAuth scopes that are not approved (<https://support.google.com/cloud/answer/7454865>). New users might not be able to install your application because the Sign-in with google is disabled. This happens when the scopes requested in your app code differ from scopes approved in your OAuth consent screen configuration page (<https://console.cloud.google.com/apis/credentials/consent>). The scopes configured in App script (<https://developers.google.com/apps-script/concepts/scopes>), Marketplace SDK (https://developers.google.com/workspace/marketplace/enable-configure-sdk#oauth_scopes), and OAuth consent screen (https://support.google.com/cloud/answer/10311615?hl=en&ref_topic=3473162) should be identical.

Please add all sensitive/restricted scopes that the app is using to your GCP Console OAuth consent screen (<https://console.cloud.google.com/apis/credentials/consent>) configuration page and click "Submit for Verification" (https://developers.google.com/apps-script/guides/client-verification#requesting_verification).

Please note that the Trust & Security team is responsible for the OAuth verification process.

If your product is not yet available in the Marketplace make sure that in your Website you dont include buttons or links to the Marketplace until it is effectively approved. Unclickable links and coming soon texts can cause delays in the OAuth review process.

Before re-submitting the add-on for the Google Workspace Marketplace, make sure your project has passed the OAuth verification process.

Additional notes: Google has not verified this app yet. If you don't verify your script project's OAuth client, users outside your domain see an unverified app screen when they try to authorize your script. You can request a verification of the OAuth client used by your app and its associated Cloud Platform (GCP) project. Once your app is verified, your users will no longer see the unverified app screen.

<https://support.google.com/cloud/answer/7454865#unverified-app-screen> Please add all sensitive/restricted scopes that the app is using to your GCP Console OAuth consent screen (<https://console.cloud.google.com/apis/credentials/consent>) configuration page and click "Submit for Verification" (https://developers.google.com/apps-script/guides/client-verification#requesting_verification).

Check this link for more information:

<https://developers.google.com/apps-script/guides/client-verification> Please note that the Trust & Security team is responsible for the OAuth verification process.

You can also follow the information in the following Blogpost for recommendations to undergo the OAuth verification process:

<https://developers.googleblog.com/2019/09/get-smart-about-preparing-your-app-for-OAuth-verification.html>

Developer documentation: <https://support.google.com/cloud/answer/7454865> <https://console.cloud.google.com/apis/credentials/consent> <https://developers.google.com/apps-script/concepts/scopes> https://developers.google.com/workspace/marketplace/enable-configure-sdk#oauth_scopes https://support.google.com/cloud/answer/10311615?hl=en&ref_topic=3473162 <https://console.cloud.google.com/apis/credentials/consent> https://developers.google.com/apps-script/guides/client-verification#requesting_verification

4. Application pending OAuth verification. Google Workspace Marketplace review process on hold.

The OAuth verification process is performed by the Trust & Safety team. If you want to understand better the difference between the OAuth verification process and the Google Workspace Marketplace review please check on the following link (<https://developers.google.com/workspace/marketplace/configure-oauth-consent-screen#differs>) .

To speed up your OAuth verification approval please check and respond to the email address provided when this project was submitted for verification, the email address should be "api-oauth-dev-verification-reply+@google.com" (the is a series of numbers and letters unique to your project's verification request). If you are able to locate an email, please reply directly with the requested additional information.

In addition, you can send an email to oauth-

feedback@google.com to request further information and proceed with the verification process.

To learn more about the OAuth verification process you can check on this link (<https://support.google.com/cloud/answer/9110914>).

Before re-submitting the add-on for the Google Workspace Marketplace, make sure your project has passed the OAuth verification process.

Additional notes: When we try to use the app this issue appears <https://photos.app.goo.gl/pugpUUY4TgtLQ7xU6>

5. The app has non verified scopes.

Google has verified this app before you add new unverified scopes.

You can prevent the "unverified app" screen from appearing by ensuring that all required scopes are submitted for verification and by only calling approved scopes.

To help prevent unverified scopes from being added to projects, the Trust and Safety team provides support and tools, including prompts from the Cloud Console when verification is required.

For further guidance on verification requirements and the unverified app screen, please consult our OAuth App Verification Help Center [https://support.google.com/cloud/answer/13463073?visit_id=638780014401772723-815454403&rd=1] and this article [<https://support.google.com/cloud/answer/7454865?hl=en&sjid=17597667875586676792-NC>].

Additional notes: Need to send the scopes corresponding to your app to be verified. Have you checked with the Trust & Safety team to see how the consent screen authorization process is going? We cannot review the app until the team has approved the scopes. Before resubmitting your add-on to the Google Workspace Marketplace, make sure your project has passed the OAuth verification process.

Please republish your App when an updated version is ready.

Thank you for your patience.

If you have any questions please contact gwm-review@google.com. To get support, please refer to the [support section](#) of our documentation.

Thanks,

Google Workspace Marketplace Review Team
